

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

1. (currently amended) A coated textile having printed patterns, comprising a textile underlayer forming a backing and combined with a coating layer formed from a film based on a polyolefin component and on an EPDM-type elastomer, wherein said coating layer has printed patterns on the surface of said coating layer which are not bonded to the textile underlayer.

2. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the polyolefin component has a Shore A hardness of between 30 and 50.

3. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the polyolefin component consists of TPE-type polymers or copolymers chosen from polyethylene, polypropylene, and blends or copolymers thereof.

4. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the polyolefin component content is between 15 and 25 parts by weight with respect to the total weight of the composition.

5. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the elastomer content is between 65 and 80 parts by weight.

6. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the composition of the coating layer is as follows:

| | | |
|---|-----|------------------------------------|
| Polyolefin component | } A | 15 to 25 parts by weight |
| EPDM-type elastomer | | 65 to 80 parts by weight |
| Paraffin oil | | 0 to 15 parts by weight |
| Metallocene-very low density polyethylene | | 10 to 30 parts with respect to A |
| Polypropylene homopolymer | | 5 to 8 parts with respect to A |
| UV, heat stabilizer | | 0.4 to 0.6 parts with respect to A |

7. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the coated textile further comprises a printing primer deposited on the coating layer.

8. (previously presented) The coated textile having printed patterns according to Claim 1, wherein said coated textile is provided with a protective varnish that is applied to the printed coating layer.

9. (previously presented) The coated textile having printed patterns according to Claim 1, characterized in that the

underlayer forming a textile backing comprises a woven, a nonwoven or a mesh material.

10. (previously presented) The coated textile having printed patterns according to Claim 1, wherein said coated textile is provided with a foam-rubber underlayer combined with the backing textile on its face on the opposite side from that bearing the coating.

11-18. (cancelled)

19. (previously presented) An article comprising a coated textile having printed patterns according to Claim 1.

20. (previously presented) The article according to Claim 19, wherein said article is a printed tablecloth.

21. (previously presented) The article according to Claim 19, wherein said article is a printed wall textile.

22. (previously presented) The coated textile according to claim 1, wherein said printed patterns are carried with a heliogravure printing technique.

23. (currently amended) ~~The coated textile according to claim 1~~ A coated textile having printed patterns, comprising a textile underlayer forming a backing and combined with a coating layer formed from a film based on a polyolefin component and on an EPDM-type elastomer, wherein said coating layer has printed patterns on the surface of said coating layer which are not bonded to the textile underlayer,

wherein the printed patterns form a decoration.

24. (previously presented) The coated textile according to claim 1, wherein the printed patterns are discontinuous and varied.

25. (currently amended) ~~The coated textile according to claim 1~~ A coated textile having printed patterns, comprising a textile underlayer forming a backing and combined with a coating layer formed from a film based on a polyolefin component and on an EPDM-type elastomer, wherein said coating layer has printed patterns on the surface of said coating layer which are not bonded to the textile underlayer,

wherein said printed patterns comprise patterns or decorations of different colors.

26. (previously presented) The coated textile according to claim 1, wherein the printed patterns comprise a decoration of 1 to 6 colors.
